

Jeff Bronstein MD, PhD received his bachelor's degree from the University of California, Berkeley and M.D. and Ph.D. from UCLA as a recipient of the Medical Scientist Training Program Award. He completed a residency in Neurology and fellowship training in Movement Disorders at UCLA and at Queens Square in London. Dr. Bronstein also completed a postdoctoral fellowship in molecular biology before being appointed an Assistant Professor of Neurology in 1994 and Director of the Movement Disorders Program in 1996 at UCLA. His clinical interests include the management of Parkinson's disease (PD) and other movement disorders, surgical treatment of PD, and developing new therapies for patients. Dr. Bronstein's research interests include the study of the causes of PD (environmental and genetic) using cell and animal models as well as population-based studies. His research is supported by the NIH, Veteran Administration, and private foundations. Dr. Bronstein is the Principle Investigator of one of 6 National Parkinson's Disease Centers (PADRECC) at the Veterans Administration Medical Center, is a project PI of the UCLA Collaborative Center for Parkinson's Disease Environmental Research (CCPDER) funded by the NIEHS and is an Investigator in the UCLA Udall Center.
